HAZWOPER Train-the-Trainer Course

Many of our clients have requested a "How To" training class to meet the qualifications to provide in-house HAZMAT Emergency Response training for their employees. Appendix E of the HAZWOPER standard states that individuals who are providing HAZMAT training should 'successfully complete a train-the-trainer program specific to the topics they will teach.' That is what this course is designed to do!

This brand new course will cover in detail the regulatory and training requirements of the Hazardous Waste Operation and Emergency Response (29 CFR 1910.120) standard. Not only does the class review the various elements of the OSHA and EPA standards, there are also demonstrations as well as "hands-on," practical simulations to meet the experiential requirements of the regulation.

You will also receive everything you need to provide this training for your employees. Because of the practical applications of the course, it is not offered online. Class size is limited so [REGISTER NOW](#). Note, that you must submit payment upon completion of registration. If this course does not apply to you, please forward to the appropriate individual in charge of your HAZMAT team.

New Membership Opportunity

We are receiving overwhelming positive feedback on our new GOLD membership program. If you are not aware, NASP is now offering a GOLD level membership for its members. In addition to the regular benefits of being a NASP regular member (now referred to as "SILVER"), a GOLD membership will offer the following resources:

The Big 5: Injuries that are Costing Companies Too Much

(Reprinted with Permission from *Safety Compliance Alert*)

Here's a useful stat: The top 10 leading causes of injuries cost employers more than \$1 billion a week in 2012, according to the Liberty Mutual Research Institute.

That's billion, with a "B."

It's more evidence that a strong safety culture not only protects workers but boosts the bottom line.

Overexertion is No. 1

Here are the five leading causes of injuries, along with the staggering costs that come with them.

2 Workers Killed by Toxic Fumes: \$266K OSHA Fine

(Reprinted with Permission from *Safety Compliance Alert*)

An animal feed company is facing over a quarter of a million dollar fine after two workers were killed by deadly gas while cleaning a rail car, OSHA said.

Inspectors said that neither worker at Agridyne LLC was equipped with an emergency retrieval system before they entered the rail tank car.

Rescue proves fatal

According to local news reports, a worker was cleaning the outside of a tanker when he fell into the open railcar hatch and was quickly overcome by fumes.

The other worker attempted to rescue him.
